

The 5-axis cutting robot Brilliant 3D has 2 additional axes (D, E-axis). This allows the specimen to be positioned and cut automatically in a single operation in nearly any position to the cutting wheel.

The device has all the features of the proven Brilliant 275 universal wet abrasive cut-off machine and therefore

OPERATION

Touch-Screen display for the ATM-Software control is easy to read thanks to smart phone technology and even easier to operate. Compact program sequences are easy to compile and therefore enable automated program sequences. Update and backed-up possible via USB.

MULTI-POSITION PROCESS MPP

With the "Multi-Position-Process" (MPP) you can place several different specimens on the table and cut them in one sequence.

The teach-in function enables a simple and user-friendly input of cutting positions by approaching.

BRILLANT 3D

meets the highest demands on space available and cutting operations.

The cuts can be precisely positioned without reclamping, so complicated instructions for cutting as well as the number of clamping tools and cutting failures are minimized. Full automation makes the entire process effectively and efficiently.

REMOTE MAINTENANCE

Using your existing broadband Internet connection, ATM provides an online fault diagnosis and operator support.

CUT OPTIMIZATION

In addition to the type of cut, variable pulse-cut feed can also be selected. Rhythmic **pulsed feed** ensures regular cooling and removal of cutting debris from the sample.
